## **Objective of the program**

1. To keep a roster of all Alumni of college and their pertinent data.
2. To encourage, foster and promote close relations among the alumni themselves.
3. Alumni are great role models for present students. Their ideas will definitely be helpful to institutions and present students.
4. Alumni are the brand ambassadors of any institution. So it's a great privilege to organize Programs like Seminars, Guest lectures, Motivational Speech by them.

The Alumni Association achieves these objectives by staging an annual program of events and reunions through communications, and by supporting student scholarships and other fundraising initiatives.

## **Outcome of the program**

1. Alumni Activities bring a path to reunion with them.
2. It helped to recollect their old memories with the faculty, friends and with the institution also.
3. It gives encouragement to present students too.

## Report

Sir C R Reddy College for Women OLD STUDENTS ASSOCIATION Principal Smt P Sailaja welcomed all the students ,staff and the Chief guest Mrs. M Santha Kumari, 1st batch student of M.Sc Organic chemistry in our college during 2002-2004, working as Lecturer in Chemistry, Government College for Women Srikakulam. K.Vani, President of Old student association, Vice President K.Vijaya Lakshmi , Joint Secretary S.Anuradha, Treasurer M.Durga addressed the students.

Chief guest Mrs. M Santha Kumari, shared the ethical and moral values that she taught in her life. She presented detailed information about Mass Spectroscopy and how it has been used in various fields of analysis and explained the same with few illustrations. She explained recent advances in Mass spectroscopy.

Mass spectroscopy is one of the primary spectroscopic methods for molecular analysis available to organic chemists. It is a microanalytical technique requiring only a few nanomoles of the sample to obtain characteristic information pertaining to the structure and molecular weight of the analyte. It involves the production and separation of ionized molecules product and finally the measurement of the relative abundance of different ions produced. Thus the mass spectrum of each compound is unique and can be used as a “Chemical fingerprint” to characterize the sample.
