1. BASIC MATHEMATICS

SECTION - A

Natural Numbers : The numbers which are used in counting are known as Natural Numbers or Positive Integers. Their set is denoted by N.

Thus $N = \{1, 2, 3, 4, \dots\}$

Sum of first N natural numbers = $\frac{n(n+1)}{2}$

Where, n = last term.

Sum of n natural numbers = $\frac{n}{2}(a+l)$

Where n = No. of numbers

a = first term

l = last term

సహజ సంఖ్యలు : మనము లెక్కించడానికి ఉపయోగించు సంఖ్యలను సహజసంఖ్యలు లేక ధరపూర్ణసంఖ్యలు అంటారు.

సహజసంఖ్య సమితి N తో సూచిస్తారు. $N = \{1, 2, 3, 4, \dots\}$

మొదటి n సహజ సంఖ్యల మొత్తం = $\frac{n(n+1)}{2}$, యిందు n = చివరి పదము

n సహజ సంఖ్యల మొత్తం = $\frac{n}{2}(a+l)$, యిందు n = అంకెల సంఖ్య.

a = మొదటి పదము

l = చివరి పదము

1. Find the sum of all the natural numbers from 1 to 15 ?

1 నుండి 15 వరకూ గల అన్ని సహజ సంఖ్యల మొత్తం కనుగొనుము?

- 1) 120 2) 121 3) 200 4) 180

2. Find the sum of all the natural numbers from 10 to 20 ?

10 నుండి 20 వరకు గల అన్ని సహజ సంఖ్యల మొత్తము కనుగొనుము?

- 1) 200 2) 165 3) 225 4) 170

Sum of squares of first n natural numbers = $\frac{n(n+1)(2n+1)}{6}$,

where n = last term i.e. $1^2 + 2^2 + 3^2 + \dots + n^2$

మొదటి n సహజ సంఖ్యల వర్గాల మొత్తం = $\frac{n(n+1)(2n+1)}{6}$, యిందు n = చివరి పదము, అనగా $1^2 + 2^2 + 3^2 + \dots + n^2$

3. Find the sum of squares of first 20 natural numbers

మొదటి 20 సహజ సంఖ్యల వర్గాల మొత్తం కనుగొనుము?

- 1) 2870 2) 2365 3) 2895 4) 2600

4. Find the sum of squares of natural numbers from 10 to 25.

10 నుండి 25 వరకు గల సహజసంఖ్యలు వర్గాల మొత్తము కనుగొనుము?

- 1) 5140 2) 5340 3) 5240 4) 5124

BODMAS:

For all types of arithmetical simplifications, the rule of BODMAS is very useful. The letters B, O, D, M, A, S in order of preference are explained as follows.

- B. Stands for Brackets
O. Stands for of (means multiplication)
D. Stands for Division
M. Stands for Multiplication
A. Stands for Addition
S. Stands for Subtraction

Note : The above order of preference is to be strictly maintained.

ప్రధాన సంఖ్యలు : 1 మరియు దాని కదే కారణాంకములుగా గల సహజసంఖ్యలను ప్రధాన సంఖ్య అంటారు.

ఉదా : 11, 23,

సంయుక్త సంఖ్య : ఒకటి కాకుండా ప్రధాన సంఖ్యలు కాని సంఖ్యలను సంయుక్త సంఖ్యలు అంటారు. ఉదా: 4, 6, 8, 9, 12,

పరస్పర ప్రధాన సంఖ్యలు లేదా సాపేక్ష ప్రధాన సంఖ్యలు : ఏవైనా రెండు సంఖ్యలకు 1 మాత్రమే ఉమ్మడి కారణాంకమై వేరే ఉమ్మడి కారణాంకము లేకుంటే ఆ సంఖ్యలను పరస్పర ప్రధాన సంఖ్యలు లేక సాపేక్ష ప్రధాన సంఖ్యలు అంటారు.

ఉదా : 14 మరియు 25 లు పరస్పర ప్రధాన సంఖ్యలు.

అకరణీయ సంఖ్యలు : a, b లు పూర్ణ సంఖ్యలు, $b \neq 0$ అయితే $\frac{a}{b}$ రూపములో వ్రాయగల సంఖ్యలను అకరణీయ సంఖ్యలు అంటారు.

కరణీయ సంఖ్యలు : ఖచ్చితమైన విలువను నిర్ణయించలేని సంఖ్యలను కరణీయ సంఖ్యలు అంటారు. ఉదా: $\sqrt{3}, \sqrt{5}, \sqrt{7}$

- i) "Could" can be regarded as the past tense of 'can' if you are simply talking about the ability of a person or thing to do something in the past. "Could" is used to say that someone had a skill or ability in the past.
e.g.: He could swim well when he was young.
He could kick penalty goals from any corner.
In my younger days, I could run very fast.
"Could" refers to past time only when the context makes the time clear.
- ii) "Could" is also used to ask polite questions:
e.g.: Could I talk to the chairman, please?
Could you, please post this letter?
- iii) "Could" is used as the past tense of can in Indirect Speech:
e.g.: Gita said, "I can't write the poem."
Gita said that she could not write the poem.

e.g.: He may come tomorrow.
It may rain.
- iii) In very formal English, "May" is used in interrogative sentences to express a hope or wish.
e.g.: May he justify our hopes and rise to the top.
May God bless you.

Might

- i) "Might" is the past tense of "may" and is used in Indirect Speech.
e.g.: She said, "I may go abroad."
She said that she might go abroad.
- ii) If you want to make a suggestion in a very polite way, you can use 'might' with 'you' in a declarative sentence. 'Might' is followed by a verb meaning 'to like' or 'to want'.
e.g.: You might like to comment on his proposal.
I thought perhaps you might like to come along with me.
- iii) To indicate an action of less probability.
e.g.: He might become Prime Minister one day.

Will

- i) 'Will' usually indicates that you are talking about a future event or situation.
e.g.: She will not return. He will reject your offer.
- ii) You use "will" when you are assuming that something is the case, and you do not think there is any reason to doubt it.
e.g.: Those of you who are familiar with the game will know this.
- iii) You use 'will' to say that something is certain to happen or be the case in the future.
e.g.: The price of food will go up.

COMPUTER TERMINOLOGY

INFORMATION TECHNOLOGY

Information Technology:

It refers to the creation, gathering, processing, storage, retrieval and delivery of information and the process and devices that make all this possible.

Information: Processed data from raw data.

Data : A collection of facts from which conclusions may be drawn; "statistical data"

Technology : It's a science, which we can apply in any application.

The history of automatic data processing begins with Charles Babbage's attempt to build an automatic mechanical calculator at Cambridge, England, in 1830. By the 1930's punched cards were in wide use in large business and various types of punched card handling machines were available.

GENERATION OF COMPUTERS :

First Generation (1941-1956)

World War gave rise to numerous developments and started off the computer age. Electronic Numerical Integrator and Computer (ENIVAC) were produced by a partnership between University of Pennsylvania and the US government. It consisted of 18,000 vacuum tubes and 7000 resistors.

Second Generation Computers (1956-1963)

The invention of Transistors marked the start of the second generation. These transistors took place of the vacuum tubes used in the first generation computers.

Advantages:

- Less power
- Less heat
- Faster and reliable
- Cheaper

Third Generation Computers (1964-1971)

Although transistors were great deal of improvement over the vacuum tubes, they generated heat and damaged the sensitive areas of the computer. The Integrated Circuit(IC) was invented in 1958 by Jack Kilby. It combined electronic components onto a small silicon disc, made from quartz.

Fourth Generation (1971-Present)

Fourth Generation computers are the modern day computers. The Size started to go down with the improvement in the integrated circuits. Very Large Scale (VLSI) and Ultra Large scale (ULSI) ensured that millions of components could be fit into a small chip. It reduced the size and price of the computers at the same time increasing power, efficiency and reliability.

TYPES OF COMPUTERS :

Super Computer:

A supercomputer is a computer that performs at or near the currently highest operational rate for computers. A supercomputer is typically used for scientific and engineering applications that must handle very large databases or do a great amount of computation (or both). At any given time, there are usually a few well-publicized supercomputers that operate at the very latest and always incredible speeds.

Mainframe Computer:

A mainframe (also known as "big iron") is a high-performance computer used for large-scale computing purposes that require greater availability and security than a smaller-scale machine can offer. Historically, mainframes have been associated with centralized rather than distributed computing, although that distinction is blurring as smaller computers become more powerful and mainframes become more multi-purpose.

- Less powerful
- Handling all kinds of scientific and business applications
- Supports 1000, remote computers
- Large online storage
- Magnetic tapes, hard disk drive, visual display, plotters, printers, tele terminal can attach with mainframe
- High speed cache memory
- Multiprogramming, time-sharing,

Mini Computers:**Definition of "minicomputer"**

"A minicomputer, a term no longer much used, is a computer of a size intermediate between a microcomputer and a mainframe. Typically, minicomputers have been stand-alone computers

- Same mainframe
- Smaller scale
- Cost lower
- Input data through Keyboard
- Most popular minicomputers are minis, Nova, DEC, PDP 11
- Languages used in minicomputers are Pascal Cobol, FORTRAN
- It is used for Business transition
- 100 kbps to 500 MIPS
- Chip based
- 30000 of an inch thick chip
- Primary and secondary memory are Rom, ram

Work Station:

A workstation, such as a UNIX workstation, RISC workstation or engineering workstation, is a high-end microcomputer designed for technical or scientific applications. Workstations are intended primarily to be used by one person at a time, although they are commonly connected to a local area network and run multi-user operating systems.

Servers:

Meaning: Server is a computer system that provides services to other computing systems over a network

- a) Occupy a place in computing similar to that occupied by minicomputer in the past, which they have largely replaced.
- b) The typical server is a computer system that operates continuously on a network and waits for requests for services from other computers on the network
- c) Many servers are dedicated to the role but some may also may used simultaneously for other purposes, particularly when the demand placed up on them as servers or modest.

Ex: In a small office a large desktop computer may act as both a desktop workstation for one person in the office and as a server is for all the other computers in the office.

Components of the Computer:

- 1) Input
- 2) processing
- 3) Output
- 4) Storage

Input: Program statements and data are fed\entered in to a computer by means of input device

CPU: Heart of the computer. It contains the logic that controls the calculations done by the computer. It is the central processor that makes comparisons performs calculations, reads, and interpreters and controls the execution of the instructions. The CPU consists of the two separate subunits.

- 1) Control unit
- 2) Arithmetic and logical unit

Clock speed:

Clock speed is the speed at which the processor at which the processor executes the information. It measured in megahertz or gigahertz, High speed, faster the processor, better the system performance. Some microprocessor is super scalar. They can execute more than one instruction.

Difference between RAM and ROM

Random Access Memory (RAM)	Read Only Memory (ROM)
RAM used as main computer memory	ROM is used for storing micro programs, control instructions that cause the machine to perform certain special operations.
RAM is a temporary memory (volatile)	ROM is permanent memory (non-volatile)
Programmers and machine use RAM	Only machines use ROM
Data and programs can be stored in RAM through input device or through auxiliary storage devices.	ROM will not allow storing data of instructions instead they will be written by the manufacturer once for all.
Power interruptions destroy RAM contents.	Power interruption do not destroy the contents of ROM

MAIN MEMORY

**Analog Computers:**

- Process data inputs of continuous form types like pressure, temperature, etc.
- Data form an Analog wave-form.
- Used in Engineering and scientific application like controlling the process of any plant.
- These computers are less accurate and provide very limited capacity for storage of data and information.
- These computers provide very few features but offer low cost solutions for physical data measurement and processing.

Digital Computers:

- Process data input of letter of numbers types like transactions of day to day work of business.
- Data form a Digital waveform like ON/ OFF or HIGH/ LOW (0/1)
- Mostly used for Business application like transaction processing and MIS (Management Information System).
- These computers are highly accurate and provide very high amount of data and information storage capacity.
- These computers offer tremendous amount of features and application is for business entertainment and other general purpose work.

SECONDARY STORAGE DEVICE**FLOPPY DISKETTES**

In the early 1970's IBM introduced a new medium for storing data. This medium consisted of a circular piece of thin plastic material, approximately eight inches in diameter, which was coated with an oxide material.

The concentric circles formed magnetically in the disk are called Tracks which are cut perpendicularly as triangles to form Sectors. The meeting point of the track and sector forms Block which is given an address where data is stored. Two types of Floppy disc

1. 3.5-inch
2. 5.25-inch

1) The electro magnets presents on the read / write heads generate a magnetic field in the iron on the storage medium as the head passes over the diskette.

2) A motor rotates the disk on spindle and also moves the Read / Write Head on the notch of the disk, which allows data to be read randomly.

3) The access time of the time for one revolution of the disk is 0.20 seconds only.

Formatting:

Before the computer can use a Floppy Disk to store data, it must be magnetically mapped into tracks and sectors called formatting. The Floppy Disk is formatted so that the computer can go directly to a specific point on the diskette with out searching through data. Formatting facilities easy access and storage.

Number of sectors in a disk:

- a) Unit used to refer the number of sectors in a disk is sectors per track.
- b) If the diskette has 80 tracks and 18 sectors per track, it has 1440 sectors (80x18) and not 18 sectors.

Storage capacity of a Magnetic Disk / Hard Disk / Floppy Disk

1) Number of Sides: Disks can be either single-sided or double-sided drive. Data can be stored on one side of both sides depending on the diskette and drive used. Use of double-sided drives and diskettes doubles the number of characters that can be stored.

2) Density: The recording density of bits per track measured, as bits per inch should also be taken into account. It can be single density or double density.

3) Number of Tracks: Number of tracks can either be 40 (in case of a single track drive) or 80 (in the case of double track drive).

MAGNETIC HARD DISKETTE

It is secondary storage medium in which data of information are stored by means of magnetic spots in the disk. It most common device for storing Direct Access files.

Removable Hard Disks:

Removable hard disks and drives attempt to combine the speed and capacity of a hard disk with the portability of a diskette. There are many different types of devices in this category. Choosing the best type is usually a matter of balancing the needs for speed, storage capacity, compatibility and prices.

Access Time

Time interval between when the data is called for or requested to be stored in storage device and when delivery or storage is completed. The total access time typically ranges from 8 to 12 milliseconds.

Seek + Latency = Access

Seek: The time taken to find the Track.

Latency: The time taken to read the data or to move the storage medium underneath the read-write head.

Data transfer time: This is the time taken to activate the read-write head, read the requested data and transmit them to primary memory for processing.

OPTICAL LASER DISK

Optical laser disk storage is capable of storing vast amount of data. Some industry analysts have predicted that optical laser disk technology may eventually make magnetic disk and tape storage obsolete. With this technology the read/write head used in magnetic storage replaced by two lasers.

- a) One laser beam writes to the recording surface by scoring macroscopic pits in the disk.
- b) Another laser reads the data from the light sensitive's recording surface.

1. Compact Disk - Read Only Memory (CD-ROM) Disks

- a. In CD ROM Disks, data is already encoded and hence they can only be read and cannot be modified.
- b. Using this disk, the user can store data of the CD in the primary memory and use it at a later stage either for processing or for display.
- c. CD ROMs have high storage capacities e.g. 650 MB

2. CD Rewritable: These are CDs on which data can re-write like on a Floppy disk. This can hold 650MB data. It allows users to save data on the disk and as it is portable and can be used to take a backup or to update data.

1. Write Once Read Many (WORM) Disk:

- a. WORM disks permit the user write information that will not be changed; the user can read the data any time.
- b. They are used extensively in image processing systems in which a document is scanned and its digitized image is burned onto an optical disk.
- c. End user companies to store their own proprietary information of permanent nature use these.

2. Magneto-Optical Disk:

- a. This can hold data up to 1,000 MB. But they are very expensive and have less reliability.
- b. The access is very slow when compared to optical disks.

3. Video Disk:

- a) Digital Video Disk (DVD) closely resembles a CD-ROM. It used laser to encode macroscopic pits in its surface but are much closer.
- b) DVD technology use higher frequency and shorter wavelength laser to etch pits, to make a CD and therefore the pits are smaller resulting in huge storage capabilities.
