## Objective:

To provide free eye checkup, blood pressure (BP), and blood sugar level screening to individuals in the community.

## Outcomes:

**Detection and management of diabetes:** Blood sugar level screenings will identify individuals with diabetes or prediabetes. Early detection of diabetes is crucial for initiating appropriate treatment and lifestyle interventions to prevent complications such as cardiovascular disease, neuropathy, and retinopathy.

**Prevention and management of hypertension:** Blood pressure screenings will help identify individuals with hypertension (high blood pressure) who may be unaware of their condition. Early detection and appropriate management of hypertension can help prevent complications such as heart disease, stroke, and kidney damage.

**Early detection of eye problems:** Through comprehensive eye examinations, including tests for visual acuity, refractive errors, and intraocular pressure, the medical camp aims to detect eye problems such as refractive errors, cataracts, glaucoma, and diabetic retinopathy at an early stage. Early detection can lead to timely intervention and prevent vision loss or impairment.
